TABLE OF CONTENTS PAGE

Climatological Notes

1. Climatological notes of 1971 1

Crookston Experiments

2. Weather summary, 1971 23

3. Available soil moisture survey, 1971 26

4. Comparison of fall and spring applied nitrogen on the yield and nutrient uptake of Era wheat 29

5. Nitrogen trials on semi-dwarf varieties of wheat, barley, and oats in 1971 34

6. Micronutrient studies on sugarbeets at Northwest Experiment Station and Glyndon 38

7. Alfalfa removal vs. plow-down for sugarbeets 42

8. Sugarbeet rotation studies, 1971 44

9. Zinc and iron trials on flax, 1971 47

Elk River Sand Plain Experiments

10. 1971 Fertigation of corn on a Hubbard loamy coarse sand in Sherburne County 50

11. Field experiments with soil modification on an irrigated Hubbard loamy coarse sand -- Elk River Station 1969-71 58

12. 1971 Frequency of irrigation study 65

13. The relative effect of three TVA sulfur coated ureas in comparison to ammonium nitrate on corn yields and composition grown on an irrigated Hubbard loamy coarse sand in Sherburne County 69

Lamberton Experiments

14. Lime plots, Lamberton, 1971 73

15. Soil fertility materials plots 78

16. Twelve years of field experiments with nitrogen source, placement and time of nitrogen application to a Webster clay loam at Lamberton from 1960 through 1971 82

17. Winter versus spring fertilization on 1968, 1969, 1970, and 1971 corn yields at Lamberton 88

Morris Experiments

18. Weather summary, 1971 92

19. Continuous corn silage 93

20. Fertilizer materials plots 94

21. Yields of field corn grown each of fifteen years (1957-1971) with varying rates of nitrogen fertilizer at Morris 99

22. Phosphorus fertilization of continuous corn 102

23. Potassium fertilization of corn 104

24. Zinc fertilization of continuous corn 107

25. NPK fertilization of soybeans 108

26. Small grain fertilization 113

27. The effect of heavy applications of animal manures on both the crop (corn) and the soil 1970 and 1971 118

Waseca Experiments

28. 1971 Corn tillage experiments 130

29. Lime plots, Waseca, 1971 140

30. Nitrogen experiments with corn 143

31. Phosphorus and potassium needs for high corn yields 148

Analyses of Tile Water

32. Analyses of tile and open ditch drainage waters in several south central Minnesota counties (1968-71) 153

Corn Planting Trials

33. Method of planting study for corn 156

Fertilization for Grass Seed

34. Fertilizer rate study with "new" varieties of timothy and Kentucky bluegrass -- 1971 159

35. Sulfur fertilization of Kentucky bluegrass -- 1971 168

36. The effect of nitrogen fertilization on seed yield and chemical composition of grasses when applied alone or with phosphorus and potassium -- 1971 170

37. Trace element study with Kentucky bluegrass on peat -- 1971 174

Forest Soils

38. Classification of natural communities 180

39. Mass, nutrient and energy dynamics of shrub species in northeastern Minnesota 182

40. Studies of some effects of forest fires 184

Fragipans

41. Alfalfa and alfalfa-bromegrass yields on Blowers sandy loam 189

Herbicide Residues

42. Soil residue studies 192

Lime Rates

43. Lime plots, Dakota County, 1971 196

Pasture Improvement

44. Pasture improvement through fertilization and weed control 199

Potato Fertilization

45. The nutrient status of Kennebec potatoes as influenced by various fertilizer treatments 208

46. Yields and specific gravity of Kennebec potatoes as influenced by fertilizer treatments 213

Small Grain Fertilization

47. Fertilizer effect on 1971 small grain yields in northwestern Minnesota 220

48. Nitrogen rate studies on semi-dwarf wheat varieties 228

49. The effect of nitrogen rates on Chris and Era wheat under irrigation 234

Soybean Fertilization

50. Soybean fertilizer placement study 235

51. Soybean nitrogen fertilizer studies 239

Sulfur Fertilization

52. Sulfur fertilization of corn and alfalfa in southern and western Minnesota 240

Soil Testing

53. Soil testing, 1971 249

Subject index begins on page 251 with experiments classified by crops and plant nutrients.
