Evaluation of the Efficiency of Band Placement of P Fertilizer for Corn, Soybean and Wheat................................................................. 52

Lamberton

The Erosion-Productivity Study at the Southwest Experiment Station........................................ 58

Twenty Seven Years of Field Experimentation With Nitrogen Source, Placement, and Time of Application to a Webster Loam at the Southwest Experiment Station.......................... 62

Morris

West Central Experiment Station Weather Summary 1986............................................................. 66

Residual Effect of Heavy Applications of Animal Manures on Corn Growth and Yield and on Soil Properties.................................................. 67

Manure Rate Study................................................................. 69

Continuous Corn Silage............................................................. 71

Investigations of Tillage, N Rate and Corn Hybrid on a Pachic Udic Haploboroll............................. 73

Soil Test Lab Comparison.......................................................... 76

Effects of Liquid Starter Rate, Placement and Analysis on Corn Growth and Yield...................... 81

Soybean Tillage Study............................................................. 85

Alfalfa Fertility-Management Study........................................... 89

Method of foliar Nitrogen Application on Three Spring Wheat Varieties .................................... 93

Topdressing Urea on Spring Wheat............................................... 95

Staples

Management of Boron for Crop Production on Irrigated Sandy Soils in Minnesota....................... 96

Corn - Soybean Rotation.......................................................... 101

Lupine Bean Study................................................................. 106

Triticale-Rye Study................................................................. 113
Weather Data 1986 ................................................................. 115
Rotation Nitrogen Study ............................................................ 116
Split Application of N for Corn on a Webster Soil ..................... 123
Nitrogen Sources for Corn with Conservation Tillage in Southern Minnesota ............................................................ 130
Nitrogen Loss to Tile Lines as Affected by Tillage ..................... 138
Starter Fertilizer Placement Effects on Corn Production ............. 141
Soil Test Comparison Study .......................................................... 145
Conservation Tillage for Corn and Soybean Production ............. 149
Tillage Systems for Corn and Soybean Crop Sequences ............. 156

Alfalfa

Liming Materials and Rates of Application for Alfalfa Production on an Acid Sandy Soil ......................................................... 159

Cauliflower

Leaf Tipburn in Cauliflower as Influenced by Genotype and Foliar-Applied Calcium Sprays ...................................................... 161

Compost

Evaluation of 'Agri-Brand' Compost as a Fertilizer Source for Processing Sweet Corn and Snap Beans ...................................................... 165

Corn

Decline Rates of Soil Test P and K in a Corn-Soybean Rotation .... 171
Nitrogen Sources and Rates for Continuous Corn in Goodhue County .................................................................................. 174
Influence of Crop History and Manure Use on Nitrogen Rates for Corn Production in Southeastern Minnesota ............. 177
Fertilizer Placement

Evaluation of the Relationship Between Tillage and Placement of P and K in a Corn-Soybean Rotation ........................................ 181

Effect of Potassium Placement on Corn Production in a High Yield Environment in Southeast Minnesota ........................................ 191

Peas

Influence of Seed Inoculation, Nitrogen Source, and Nitrogen Rate on Productivity of Processing Peas ........................................ 199

Potatoes

Nitrogen Fertilizer Rate and Timing Studies on Irrigated Potatoes ........................................ 207

Strawberry

Variation in Foliar Nutrient Composition of Strawberry as Influenced by Genotype and Location ........................................ 211

Sulfur

Sulfur Management for Corn Production on Irrigated Sandy Soils ........................................ 215

The Effect of Sulfur Fertilization on Yield and Forage Quality of Corn and Alfalfa ........................................ 218

Tillage

The Effect of Tillage on Corn and Soybean Production in Southeastern Minnesota ........................................ 229

The Effect of Tillage System on Stand Establishment, Presence of Weeds, Growth, Grain Yield, and Protein Content of Winter and Spring Wheat, and Barley ........................................ 243

The Effect of Tillage System, Variety, and Fungicide Application on Winter and Spring Wheat, Barley, and Soybean Production ........................................ 254

Corn - Tillage Residue Management ........................................ 268

Tillage and Diffuse Source Phosphorus Pollution in the Clearwater River Watershed, Minnesota, 1986 ........................................ 275

The Effect of Tillage on Soil Nitrogen with Corn and Soybean Production in Southeastern Minnesota ........................................ 284
