* THE REGULAR SERIES NOW INCLUDES PERCENT ORGANIC MATTER

Recommendations available for these crops

SMALL GRAINS

10. Barley
11. Oats
12. Rye/Triticale
13. Wheat

MISCELLANEOUS

14. Buckwheat
15. Edible Beans
16. Fallow
17. Flax
18. Grass Hay
19. Grass Seed Prod.
20. Grass Pasture
21. Millet
22. Native Grasses
23. Potatoes

LEGUMES

01. Alfalfa, New Seed
02. Alfalfa, Established
03. Birdsfoot/Trefoil
04. Legume/Grass Hay
05. Legume/Grass Pasture
06. Red Clover

CORN

07. Corn, Grain
08. Corn, Silage
09. Sweet Corn

MISCELLANEOUS (continued)

24. Rape/Mustard/Canola
25. Sorghum/Sudan
26. Soybeans
27. Sugarbeets
28. Sunflowers
29. Wild Rice

VEGETABLES

30. Asparagus, New Planting
31. Asparagus, Establ. Planting
32. Beans, Snap
33. Beets, Table
34. Broccoli
35. Brussels Sprouts
36. Cabbage
37. Cauliflower
38. Carrots

VEGETABLES (continued)

39. Celery
40. Cucumbers
41. Lettuce
42. Melons
43. Onions, Dry
44. Onions, Green
45. Parsnips
46. Peas
47. Peppers
48. Pumpkins/Squash
49. Radishes
50. Turnips
51. Rutabaga
52. Spinach
53. Tomatoes

INSTRUCTIONS FOR COMPLETING SOIL SAMPLE INFORMATION SHEET

Field History (1): This information is essential for us to provide the most accurate nitrogen recommendations. Indicate crops grown the past **two** most recent growing seasons. BE SURE TO USE THE CROP CODE NUMBER FROM THE LISTING ON THE FRONT SIDE. If alfalfa was the crop grown during either or both of the two previous growing seasons, it's important to indicate the number of plants (crowns) per sq. ft.

Proposed Crops and Yield Goals (2): You can select recommendations for up to three crops by entering the corresponding crop code number, or **three yield goals** for one crop. At least one option must be completed to receive a fertilizer recommendation, but there is no requirement to complete all options. If alfalfa is planned for the second crop year, list the crop code 01 under Option 2 or Option 3 with the desired yield in order to get a lime recommendation to pH 6.5. For CRP acres, list the crop most similar to that being seeded (e.g., 04 for legume/grass hay, or 22 for native grasses.)

Tests Requested (3): Indicate the test choices for each sample. Cost for each test is shown. **Before selecting nitrate, read the information below for Nitrate Test** to see if it applies to your area or crop.

- **Regular Series:** Sample the plow layer for cultivated land, or to 3 inches for pastures or sod fields. Includes phosphorus, potassium, pH and lime requirement, percent organic matter, estimated texture.
- **Special Tests:** These tests are to be determined only on the plow layer sample. Includes zinc, copper, iron, manganese, boron, calcium, magnesium, soluble salts (electrical conductivity). Copper recommendations apply only for peat or muck soils. Research has shown that for Minnesota soils, tests for iron and manganese are not practical; they are included because of requests for the test.
- **Sulfur Test:** The sulfur test is not a reliable predictor of sulfur needs. Sulfur recommendations are based on crop and soil texture. See your county extension educator for details.
- **Nutrient Management P Test:** This test is an Olsen extractable P method, but is designed for situations where the soil test level for phosphorus is expected to be in the high range (>50 ppm Olsen) and is required for nutrient management decisions. Range is 20 – 250 ppm extractable Olsen P.
- **Nitrate Test:** For the N recommendation to be based on the nitrate value, the soil **MUST** be collected to a depth of 24 inches. There are two options: 1) submit two samples, 0-6" depth (if a regular series or other tests are included) and a 6"-24" depth sample; 2) collect the soil from 0-24" for the nitrate test only. The test applies to non-sandy soils in western Minnesota with an exception noted below. This test is preferred for making N recommendations for the counties west of and including Lake of the Woods, Beltrami, Becker, Otter Tail, Douglas, Pope, Kandiyohi, Renville, Redwood, Cottonwood and Jackson. In these counties, the test is used in making N recommendations for corn, small grains, potatoes and sugar beets.

For the counties EAST of those cited, the nitrate test is used to recommend N only if the sample is collected in the spring before or near planting (April 1 – June 15).

N fertilizer recommendations will not be based on the analysis of only plow layer samples for nitrate-nitrogen. If only a plow layer sample is submitted, N recommendations will be based on cropping history, intended crop, yield goal, and soil organic matter level.

Samples collected for the nitrate test must be **air-dried immediately** to slow down microbial activity. Drying can be accomplished by spreading the soil in the sun, or placing near a heat source. If only nitrate is to be determined, the samples can be dried in a microwave oven using several 2-minute power cycles, stirring between each cycle. Alternatively, samples can be frozen and sent to the lab in a well-insulated package, which is additional shipping expense by the sender.

SAMPLING INSTRUCTIONS

Divide the field into uniform areas. Each area should have the same soil color and texture, cropping history, fertilizer, lime and manure treatments. One sample should not represent more than 20 acres on level, uniform landscapes, or 5 acres on hilly or rolling land. Within each area collect 15-30 sub-samples (cores, borings or spade slices) in a zig-zag pattern throughout the designated field area. The more variable the soil, the more sub-samples should be combined per area sampled. Mix the sub-samples thoroughly in a clean plastic pail, and fill the sample box or bag to the fill line (1 pint). If samples must be taken wet, they should be dried before being mixed and submitted to the laboratory. Do not exceed a drying temperature of 97°F, and do not use a microwave oven unless only the nitrate test is requested.

Sample each area as follows: Scrape off all surface residue. Sample to a depth of 6-8 inches (plow layer) for cultivated crops or 3 inches for pasture or sod fields. Sample row crop fields between rows, except for ridge-till plantings. Where RIDGE-TILL is used, take the sample to a depth of 6-8 inches on the shoulder of the ridge, avoiding the starter fertilizer band. Also avoid sampling dead or back furrows, terraces, old fence rows, lime or fertilizer spill areas, headlands, eroded knolls, low spots, or small saline areas. Sample at least 300 feet away from gravel or crushed limestone roads because their dust changes soil pH.

SHIPPING INSTRUCTIONS

Fill out the information sheet as completely as possible so that accurate recommendations can be given. Keep a copy for your records. Place samples in a shipping carton, enclose the information sheet with check made payable to The University of Minnesota. Please do not send cash. The lab is not responsible for cash sent through the mail. If the shipping carton is a re-used box, wrap in heavy brown paper.

Ship samples to:
Soil Testing Laboratory
University of Minnesota
135 Crops Research Building
1902 Dudley Avenue
St. Paul, MN 55108

For additional information or requests for additional soil sample information sheets and collection bags, call or visit your local county extension office, or call the laboratory at (612) 625-3101 or fax (612) 624-3420.
